

High Impact Opportunities!

Hexion Specialty Chemicals is the world's largest producer of thermosetting resins. The second-largest North American-based specialty chemicals company, Hexion generated 2008 sales of \$6.1 billion through its leading positions across various end markets and geographies.

Plant Engineer - Edmonton #09-0433

In this role, you will be responsible for engineering direction and supervision on capital projects, ongoing production/process problems and facility improvements. Additionally, you will implement projects and provide mechanical design assistance to maintenance and production.

Essential functions include providing Engineering support and direction for a 24 x 7 manufacturing site, process engineering for Formaldehyde, Resin, Wax and Spray Dry plants. Additional responsibilities include waste management, regulatory compliance, production engineering, quality improvement (Six Sigma, SAP and NCR information systems, etc), as well as design and executing of improvement projects and implement HSE and regulatory protocols.

While primarily focused on Plant/Mechanical Engineering, this position will require an individual skilled in process engineering and continuous process improvement. Must possess a B.S. in Chemical or Mechanical Engineering along with 5 - 8 years plant engineering experience within the chemical or related industry. Must include at least 2 years project engineering responsibilities. In addition, you should have exceptional organizing abilities to manage multiple projects and excellent leadership and communication skills. SAP knowledge is a definite asset.

Must be:

- Skilled in all aspects of project definition, evaluation, design, budgeting, and execution
- Skilled with multiple computer applications, including databases, spreadsheets, word-processing, project management, presentations, and relevant technical software
- Able to work collaboratively with various disciplines and trades and utilize a team approach for solving problems.
- Experienced in mechanical design projects associated with utility systems, material handling, structural, and process piping. Must know engineering/pipe and equipment specifications

Hexion offers its employees a dynamic work environment and the ability to be a part of a company that is one of the fastest growing in the industry. Combine that with exceptional benefits and a culture that rewards performance, and you'll have

the building blocks of a great career.
